

ABSTRACT

INJECTION MOULDED CONTAINERS

5 A process for the manufacture of single or multi-
compartment rigid, water-soluble container, containing a
detergent composition wherein the container is at least
partially made of injection moulded water soluble poly-
mer; the process comprising the steps of forming the con-
10 tainer, keeping the container under substantially anhy-
drous conditions, filling the container with the deter-
gent composition and sealing, wherein the container is
allowed to contact / brought into contact with a plasti-
ciser after sealing..
